Patent No. 6130058
GENERAL INFORMATION:
APPLICANT: LE BOUNDELLES, BEATRICE
APPLICANT: WHITING, PAUL JOHN
TITLE OF INVENTION: STABLY TRANSFECTED CELL LINE EXPRESSING
TITLE OF INVENTION: RECEPTORS, AND NOVEL CLONED NMDA
TITLE OF INVENTION: RECEPTOR SUBUNIT SEQUENCES
NUMBER OF SEQUENCES: 21
CORRESPONDENCE ADDRESS:
ADDRESSE: MICHAEL D. YABLONSKY - MERCK & CO., INC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            E: MICHAEL D. YABLONSKY - MERCK & CO., INC.

SOFTWARE: Patentin Release #1.0, Version #1.30

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/436,332B

FILING DATE: 10-MAY-1995

CLASSITCATION: 435

ATTORNEY/AGENT INFORMATION:

NAME: YABLONSKY, MICHAEL D.

REGISTRATION NUMBER: 40,407

REFERENCE/DOCKET NUMBER: 71210Y

TELEPHONE: 732-594-4778

TELEPHONE: 732-594-4778

INFORMATION FOR SEQ ID NO: 10: SEQUENCE CHARACTERISTICS:

LENGTH: 1464 amino acids

TYPE: amino acid

STRANDEDNESS: unknown

STRANDEDNESS: unknown

Sequence 1091, Application US/09198452A
Patent No. 6559294
GENERAL INFORMATION:
APPLICANT: Griffais, R.
TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments
TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments
TITLE OF INVENTION: Inference and uses thereof, in particular for the diagnosis, preverence of the properties of 10-003-999
TITLE OF INVENTION: and treatment of infection
FILE REFERENCE: 9710-003-999
CURRENT APPLICATION WINBER: US/09/198,452A
CURRENT FILING DATE: 1998-11-24
NUMBER OF SEQ ID NOS: 6849
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

Patent No. 6673910

GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO MORAXELLA CATAR:
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.2005-001
CURRENT PELING DATE: 2000-04-04
NUMBER OF SEQ ID NOS: 3840
ENGINE OF 2373
ENGINE OF 2373

-i- DATABASE: NAME-NIB-LRRS.
                                                                                                     AvrRpt2 and modulates RPS2-mediated resistance.";

Cell 112:379-389(2003).

-!- FUNCTION: Disease resistance (R) protein that specifically recognizes the AvrRpt2 type III effector avirulence protein from Pseudomonas syringae. Resistance proteins guard the plant against pathogens that contain an appropriate avirulence protein via an indirect interaction with this avirulence protein. That triggers a defense system including the hypersensitive response, which restricts the pathogen growth. Acts via its interaction with RIN4, and probably triggers the plant resistance when RIN4 is degraded
                                                                                                                                                                                                                                                                                                                                  At4g26090.

-I- CAPALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-I- SIMILARITY: Belongs to the Ser/Thr protein kinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright. CATALYTIC ACTIVITY: N deoxynucleoside triphosphate = N diphosphate
                                                  PTM: This protein undergoes a protein self splicing that involves a post-translational excision of the three intervening regions (inteins) followed by peptide ligation.
SIMILARITY: Belongs to the DNA polymerase type-B family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SEQUENCE FROM N.A.

ankyrin-like protein - Arabidopsis thaliana
NyAlternate names: protein F18022.20
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 20-Apr-2000 #sequence_revision 20-Apr-2000 #text_change 09-Jul-2004
C;Accession: T48596
R;Bevan, M.; Murphy, G.; Ridley, P.; Hudson, S.; Bancroft, I.; Mewes, H.W.; Rudd, S.; Les
Bubmitted to the Protein Sequence Database, April 2000
A;Reference number: 224493
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Deta-lactamase class C domain (PBPX family) containing protein [imported] - Clostridium . C;Species: Clostridium acetobutylicum C;Species: Clostridium acetobutylicum (c)Date: 14-Sep-2001 #sequence_revision 14-Sep-2001 #text_change 09-Jul-2004 C;Accession: B97245 F;Nolling, J.; Breton, G.; Omelchenko, M.V.; Markarova, K.S.; Zeng, Q.; Gibson, R.; Lee, J.
